## Table of contents

<b>1 Objectives</b>	<b>1</b>
<b>2 Use Quarto in a terminal</b>	<b>1</b>
<b>3 Parametrise your report</b>	<b>2</b>

This exercise builds on the previous exercises where you learnt to [create a simple MS Word report](#) and to [add dynamic elements to your report](#) . Mastering these two exercises is essential for successfully completing the current exercise.

## 1 Objectives

- If you have generated the simple MS Word report as in [Exercise 4](#), continue working on the same Quarto notebook you already modified. Otherwise, download the files `df1.RData`, `df2.RData`, and `exercise5.qmd` using the links provided on the right-hand side of this page. For simplicity, please put these two files under the same folder and open the Quarto notebook in RStudio.
- Complete each of the following tasks and render the document after each task or set of tasks to track your progress.

## 2 Use Quarto in a terminal

- ☐ Render your MS Word report using the RStudio Terminal;

```
quarto render exercise3.qmd
```

- ☐ Change the output filename when rendering the report;

```
quarto render exercise3.qmd --out exercise5_report1.docx
```

#### 💡 Tip

- You can access the RStudio terminal in the **Terminal** tab immediately to the right of the **Console** tab:

### 3 Parametrise your report

- ☐ Adjust the report to focus on data for the year 2022 only ;
- ☐ You were unfortunately provided with a previous erroneous version of the dataset. Update the report to use the dataset stored in `df2.RData` instead of the one stored in `df1.RData` ;
- ☐ Render 3 reports (1 report with `df2.RData` for the full outbreak period, 1 report with `df1.RData` for year 2021 only, 1 report with `df2.RData` for year 2021 only) adapting the following command which needs to be run in a terminal (ensure your working directory is the one where your Quarto document is stored and all file paths are correct).

```
quarto render exercise3.qmd --out exercise5_report_df1.docx -P dataset:df1.RData
```

#### 💡 Tip

- See [Quarto documentation about parameters](#)
- See [Quarto documentation about rendering outputs using different parameters](#)

#### ❗ Discussion question

Discuss the advantages and disadvantages of using R within Quarto compared to using R scripts.
