## Table of contents

<b>1 Objectives</b>	<b>1</b>
<b>2 Parametrise your report</b>	<b>1</b>

This exercise builds on the previous exercises where you learnt to [create a simple MS Word report](#) and to [add dynamic elements to your report](#) . Mastering these two exercises is essential for successfully completing the current exercise.

## 1 Objectives

- Open your modified Quarto document `exercise4.qmd` in RStudio;
- All text formatted in bold is a placeholder and should be replaced with appropriate automated calculations or cross-references;
- Complete each of the following tasks and render the document after each task or set of tasks to track your progress.

## 2 Parametrise your report

### Tip

- See [Quarto documentation about parameters](#)
- See [Quarto documentation about rendering outputs using different parameters](#)

- ☐ Adjust the report to focus on data for the year 2022 only ;

- ☐ You were unfortunately provided with a previous erroneous version of the dataset. Update the report to use the dataset stored in `df2.RData` instead of the one stored in `df1.RData` ;
- ☐ Render 3 reports (1 report with `df2.RData` for the full outbreak period, 1 report with `df1.RData` for year 2021 only, 1 report with `df2.RData` for year 2021 only) adapting the following command which needs to be run in a terminal (ensure your working directory is the one where your Quarto document is stored and all file paths are correct).

```
quarto render exercise3.qmd --out report_data1.docx -P dataset:df1.RData
```

You can find a terminal in RStudio

**! Discussion question**

Discuss the advantages and disadvantages of using R within Quarto compared to using R scripts.
