#### Table of contents

1	Overall objective	]
2	Parametrise your report	1
3	Finalise your MS Word report	2

### 1 Overall objective

- You are tasked with generating a Microsoft Word report on an outbreak. Open the Quarto document exercise3.qmd in RStudio.
- All text formatted in bold is a placeholder and should be replaced with appropriate automated calculations or cross-references.
- Complete each of the following tasks and render the document after each task or set of tasks to track your progress.

## 2 Parametrise your report

- See Quarto documentation about parameters
- See Quarto documentation about rendering outputs using different parameters
- $\square$  Adjust the report to focus on data for the year 2022 only;

	You were unfortunately provided with a previous erroneous version of the dataset. Up-		
	date the report to use the dataset stored in df2.RData instead of the one stored in		
	df1.RData;		
	Render 3 reports (1 report with df2.RData for the full outbreak period, 1 report with		
	${\rm df1.RData}$ for year 2021 only, 1 report with df2.RData for year 2021 only) adapting the		
	following command which needs to be run in a terminal (ensure your working directory		
	is the one where your Quarto document is stored and all file paths are correct).		
uarto randar evercise3 amdout report data1 docy -P dataset.df1 RData			

Discussion question

Discuss the advantages and disadvantages of using R within Quarto compared to using R scripts.

### 3 Finalise your MS Word report
